## AMADOR GOLD CORP. COMMENCES DRILLING ON HORWOOD GOLD PROPERTY IN WEST TIMMINS DISTRICT

- **PROPERTY LOCATED ALONG A SPLAY OFF DESTOR-PORCUPINE FAULT ZONE AND IS BELIEVED TO HAVE SIMILAR STRATIGRAPHY TO WEST TIMMINS MINING/LAKE SHORE GOLD 2009 DISCOVERY OF 12.75 G/T OVER 83.4 METERS**
- **CURRENT DRILLING WILL TEST DOWN DIP EXTENSION OF BEND ZONE DRILL INTERCEPT OF 12.35 G/T GOLD OVER 2.4 METERS**

VANCOUVER, BC - Amador Gold Corp. (TSX-V: AGX) (the "Company") is pleased to announce it has commenced diamond drilling on its wholly owned Horwood Property in the West Timmins gold district. The property is located along a splay off the Destor-Porcupine Fault, the Hardiman Bay Fault, approximately 60 km southwest of recent gold discoveries made by Lakeshore Gold Corp. and West Timmins Mining Inc.

The estimated 1400 meter drill program will test numerous high-grade gold targets including:

- **The RHB zone:** Recently returned assays as high as **183.5 g/t gold** on grab samples taken from outcrop. Drilling on the RHB zone will advance pending results from a recent IP (induced polarization) geophysical survey.
- **The Labbe #1 Zone:** Has never been drilled to depth although historic shallow drilling by Queensway Mines Ltd. Traced a gold bearing quartz vein for strike length of 76.2 meters (250 feet) with an average grade of 17.49 g/t (0.51 oz/t) Au over 0.91 meters (3.0 feet.) No subsequent deep drilling has occurred on this vein system.
- **The Bend Zone:** 2008 drilling done by the Company intersected **12.35 g/t gold over 2.4 meters**. This intersection is near the bottom of the deepest hole in the program and to date, no follow-up drilling has been done.
- Drilling to test other induced polarization (IP) targets

An audio interview on the Horwood project has been prepared by Peter Caldbick, etc.. To listen to the interview please click on the following link (if the link does not work cut and paste it into your web browser address bar):
